Objective

Seeking a Senior Backend Engineer role focused on large-scale platform reliability and developer productivity. I specialize in designing resilient services and data pipelines that improve performance, cost efficiency, and operational excellence.

Summary

Backend engineer with 8+ years of experience building distributed systems for fintech and e-commerce platforms. I have led architecture and delivery for order processing, payment orchestration, and real-time analytics services handling billions of API requests per month. My work improved P99 latency, reduced cloud spend, and increased deployment velocity through platform automation. Core stack includes Java, Go, Kafka, PostgreSQL, Redis, Kubernetes, and Azure.

Core Skills

- Distributed systems: idempotency, consistency models, event-driven architecture
- Data engineering: Kafka streams, CDC pipelines, warehouse ingestion
- Cloud platforms: Azure, Kubernetes, containerized microservices, observability
- Reliability engineering: SLO/SLA design, incident response, chaos testing
- Languages & tooling: Java (primary), Go, Python; CI/CD; Terraform; SQL

Experience

StripeCart Pte Ltd | Checkout Platform

Senior Backend Engineer | 2022.03 - Present

Core team for the regional checkout and payment orchestration platform serving 12 markets.

- Led design and rollout of an event-driven payment orchestration service supporting cards, wallets, and local methods.
- Introduced idempotent transaction flows and outbox pattern to eliminate duplicate charges during retries.
- Partnered with Risk, Data, and Frontend teams to standardize APIs and reduce integration lead time.
- Improved checkout P99 latency by 38% and cut failed payment incidents by 42% year-over-year.

NovaCommerce Technology

Backend Engineer | 2019.06 - 2022.02

- Built order lifecycle microservices and asynchronous inventory reservation workflows.
- Migrated monolith modules to Kubernetes-based services with centralized tracing and metrics.
- Reduced cloud infrastructure cost by 25% through right-sizing, caching strategy, and batch optimization.

BlueOcean Labs (optional)

Software Engineer | 2017.07 - 2019.05

- Developed internal API gateway extensions for auth, quota control, and request auditing.

Education

National University of Singapore | B.Eng. | Computer Engineering | 2013.08 - 2017.06
